

Recommended Planting Instructions

- Select where you want to plant your seedling.
- Plant at least 2 meters from any building.
- Plant in full sunlight, rather than in the shade.
- Using a garden spade or shovel remove any surface vegetation to a depth of 5 cm.
- Dig a hole approximately 30 cm x 30 cm and about 20 cm deep.
- Break the soil into a fine condition and put most of this loose soil back into the hole.
- Make a small hole in the centre of the soil.
- Remove the ribbon and plastic bag from the seedling.
- Dip the seedling in water for 1 minute before placing it in the hole.
- The hole should be deep enough to contain the seedling plug.
- Hold the seedling in an upright position and with your hand firm the soil around and over the plug and covering the plug with about 1 cm of soil.
- Firm the soil (but do not pack) around the seedling that you have just planted.
- If available, put 2 cm of mulch over the entire area that you prepared for planting.
- Be prepared to water your seedling at least weekly until it is well established.

GOOD LUCK WITH YOUR PLANTING!
